▲ Please supply less than 50% of the rated load current when installing several SSRs closely due to decreasing effectiveness of protection against heat.

**■ Cautions During Use**

- Attach a heatsink and ventilate for smooth convection current. If not, congested heat transfer may cause product failure or malfunction.
- For mounting multiple SSR, please keep certain installation intervals for heat prevention. For horizontal installation (when the heights of input part and output part are equal), it is recommended to apply less than 50% of the rated load current.
- Make sure do not touch the heatsink or the unit body while power is supplied or right after load power is turned OFF. If not, it may cause a burn.
- Connect the proper cable for the rated load current with output terminal.
- Use rapid fuse of which I<sub>t</sub> is under 1/2 of SSR I<sub>t</sub> in order to protect the unit from load's short-circuit current. In case of a short-circuit please replace the fuse which has same specification.
- In case that load's current is lower than SSR min. load current, connect dummy resistance to the load in parallel so as to make load's current higher than SSR min. load current.
- When selecting phase control with random turn-on model, install the noise filter between load and load's source.
- Make sure that the screw on output terminal is tightly fastened. Using the unit with loose bolt may cause product failure or malfunction.
- Do not touch the load's terminal even if output is OFF. It may cause electric shock.
- The signal input of the 4-30VDC model should be supplied by the insulated and limited voltage/current or by Class 2 power supply.
- To attach the heatsink, use Thermal Grease as below or that of equal specification.  
※ Thermal Grease: GE TOSHIBA (YG6111), KANTO-KASEI (FLOIL G-600), SHINETSU (G746)
- Allow following environments to install this unit.
  - ① Where temperature/humidity is over the rated specifications

  - ③ Where inflammable or corrosive gas exists
  - ④ Where direct rays of light exists
  - ⑤ Where several shock, vibration or dust exists
  - ⑥ Where near facilities generating strong magnetic forces or electric noise
- This product may be used in the following environments.
  - ① Indoors
